

ADVANCED PLUS FOR A REASON

Published by Reinke Manufacturing Co., Inc. | 1040 Road 5300 Deshler, NE 68340 | 402-365-7251 | www.reinke.com

At every opportunity, a grower asks themselves how to save money while maximizing their yields and profits. The RPM Advanced Plus™ main control panel can help accomplish this by providing additional value that can lead to increased yields, savings and operational growth.

Let's talk about the value of the Advanced Plus™ panel.

The most noticeable difference with the Advanced Plus panel is the new customizable interface with a 4.3-inch full color touch screen display. This new display is easy to program and is capable of performing standard functions with the press of the buttons such as stop, start, forward and reverse. So, what does a customizable display mean? Growers can control what they would like to see on their home screen. The display is also easy to program and navigate.

The Advanced Plus panel is a ReinCloud-Ready™ product. ReinCloud-Ready products are capable of connecting to the remote monitoring and operational software, known as ReinCloud®. ReinCloud gives the user the ability to remotely monitor and control the pivot with any internet connected device. This web-based application is also easy to use and allows the grower to perform numerous functions, receive notifications and more.

Speaking of more ... with the Advanced Plus main control panel, there are several additional features beyond the Advanced panel. Electronic flow meter input, independent pump control, pressure restart, temperature restart, speed control by percentage are all standard features of the Advanced Plus panel. The grower also has additional options, such as pressure transducers, record keeping and more. These new features, packaged with ReinCloud, offer the grower greater control without having to travel to the pivot.

These benefits add up to a savings in labor and fuel by using the Advanced Plus panel. But what about the increased yields and operational growth?

Increased yields, savings and operational growth all work

This is a product I'm excited about ... it has all the functions my growers use on a touch screen for a fraction of the cost."

– Gary Benedict, Midstate Irrigation

together with the Advanced Plus panel. Increased functionality and an easy-to-use display enables the grower to program the panel with the focus on maximizing watered acres. Reinvest profits from the operation into additional remote-monitoring products, install new Reinke center pivots and laterals on the farm or expand farmable acres.

The RPM Advanced Plus panel also comes with a five-year warranty, giving growers peace of mind and letting them know that Reinke stands behind the product.

Advanced Plus panels are available with new systems, as a complete panel replacement or as a faceplate to upgrade an existing RPM panel. Contact your Reinke Certified irrigation dealer for further information and pricing.

No matter what option the grower wants – Reinke has a product that will provide added value for the operation.
