

FEELING BURIED?

Reinke
NAVIGATOR™
SERIES OF GPS CONTROLS

Upgrade to Reinke Navigator™ GPS for your Valley® swing arm corner to prevent costly breakdowns due to buried wire guidance. Virtually maintenance free, Navigator GPS is a cost effective way to improve your acreage and yield. Navigator GPS is now available for select Valley swing arm corners.

Eliminate Buried Wires

Buried wires can be damaged by rodents, rocks and even lightning. Replacing buried wires requires trenching underground to locate the issue resulting in costly time, labor and money.

Rough Terrain

Producers who work with rocky and hard-to-trench soil will benefit from swing arm irrigation more effectively. Rough terrain will no longer decide where boundary wires can be buried, making it possible to reach the field's far edges.

Versatility

Not only is Navigator GPS compatible with Reinke irrigation systems, it's also designed for use on Valley Standard and Precision swing arm corners.

Extreme Accuracy

With the longest proven track record of any GPS-based control system, Reinke's Navigator GPS provides reliable, accurate and position information for fields of any shape and size.

**Don't let something underground keep you
from staying on top!**
